

1020YV 10.1" LED LCD Monitor w/ VGA & AV Inputs

Description

Xenarc Technologies Corp. was the first to introduce a 10.1" LED LCD screen with VGA input, and now we have further improved this popular model by incorporating the latest LED backlight technology. In addition, Solid Capacitors are used in place of Electrolytic Capacitors throughout the unit to further improve the stability and durability especially in extreme temperature conditions.

Don't mistake this monitor for an ordinary video monitor that displays composite video. This 10.1" monitor has 1024 x 600 pixels (3072 x 600 sub-pixels) that help display crystal clear text and ultra-sharp images through your computer's VGA signal.

The brushed, anodized aluminum face plate gives the display a futuristic yet elegant look. The entire enclosure is constructed with aluminum, making the unit both strong and light weight and the thin profile (only 1.19") makes the display very space saving.
